PHARMACY (PHAR)

PHAR 500 - COLLOQUIA-PHARMACY PROFESSION
The course introduces students to the profession, historic elements, and the process for becoming a pharmacist. Students will engage in self-reflection about the opportunities within the profession and the education and training required to obtain their desired pharmacy position. This course introduces the importance of interprofessional approaches to patient care in complex health care systems and the role of the pharmacist to assure optimal medication therapy outcomes.
Credits: 1

PHAR 505 - IMMUNIZATION CERTIFICATION
Pharmacy-Based Immunization Delivery is an innovative and interactive training program that teaches student pharmacists and pharmacists the skills necessary to become a primary source for vaccine information and administration. The program teaches the basics of immunology and focuses on practice implementation and legal/regulatory issues.
Credits: 1

PHAR 510 - BIOCHEMISTRY I
Knowledge of biochemistry is necessary to understand physiology and pathology of all cells, tissues and organ systems, as well as pharmacologic and therapeutic strategies employed in disease management. This clinically relevant biochemical knowledge base will be covered in two courses in the curriculum designated as Biochemistry I & II and are designed to produce specific educational and ability-based outcomes.
Credits: 4

PHAR 511 - BIOCHEMISTRY II
Knowledge of biochemistry is necessary to understand physiology and pathology of all cells, tissues and organ systems, as well as pharmacologic and therapeutic strategies employed in disease management. This clinically relevant biochemical knowledge base will be covered in two courses in the curriculum designated as Biochemistry I & II and are designed to produce specific educational and ability-based outcomes.
Credits: 4

PHAR 512 - CLINICAL MICROBIOLOGY & IMMUNOLOGY
Clinical microbiology and immunology is designed to train students in the principles of microbiology and introduce them to its application in pharmaceutical and clinical practice and to the understanding and management of infectious diseases. Topics in pharmaceutical and clinical microbiology will include fundamental principles of pathogenicity (specifically bacteria, fungi, viruses and parasites), antimicrobial agents, contamination and infection control, aseptic techniques and sterility requirement in pharmaceuticals production.
Credits: 4

PHAR 514 -
This course is focused on providing the background in functional anatomy, physiology, and pathology of organ systems that will allow students to integrate knowledge necessary to formulate a therapeutic care plan, to recommend and defend the course of treatment that best addresses a patient’s needs, to evaluate the effectiveness of a treatment regimen and manage medications in a manner that assures optimal therapeutic.
Credits: 4

PHAR 515 -
This course is focused on providing the background in functional anatomy, physiology, and pathology of organ systems that will allow students to integrate knowledge necessary to formulate a therapeutic care plan, to recommend and defend the course of treatment that best addresses a patient’s needs, to evaluate the effectiveness of a treatment regimen and manage medications in a manner that assures optimal therapeutic outcomes.
Credits: 4

PHAR 519 - PHARMACEUTICS I: CALCULATIONS
This course focuses on the arithmetic operations involved in ensuring that accurate doses of medications are dispensed to patients. It is aimed at developing the pharmacy students' knowledge, skills and attitudes that would engender attention to detail, precision and accuracy in every operation that they perform so as to ensure that error-free, safe and efficacious medicines are dispensed to clients at all time. The course will develop students' skills in pharmaceutical calculations applicable to practice in conventional as well as in specialized settings such as prescription filling, medication order compounding, determination of dosage regimens and estimation of patients' compliance in community, clinical & hospital practice, industrial research and development, and in manufacturing.
Credits: 2

PHAR 520 - PHARMACEUTICS I: DRUG DELIVERY
The course will familiarize the student with the physical and chemical principles governing pharmaceutical chemistry and dosage form development. The student will be introduced to how basic physical/chemical principles are important in the preparation, compounding of the dosage form, and disease-based or patient-centered decision making and therapeutic outcomes. The influence of physico-chemical principles on storage and administration of the various pharmaceutical dosage forms will also be covered in class.
Credits: 4

PHAR 521 - PHARMACEUTICS II
The course focuses on physical and chemical principles relevant to the design, formulation, manufacturing, and use of pharmaceutical products such as powders, tablets, capsules, controlled delivery systems, sterile products and biopharmaceuticals. The properties of drug substance, non-active ingredients, excipients, and potential interactions between two entities are discussed. The influence of the interactions and relevance on drug product performance, stability and patient safety is highlighted. Related clinical outcomes relevance is discussed.
Credits: 3

PHAR 522 - PHARMACEUTICS III
Pharmaceutics III is a continuation of the didactic and laboratory courses in Pharmaceutics I/II: Drug Delivery. The principles and mechanisms of drug absorption, distribution, metabolism, elimination (ADME), bioavailability and bioequivalence will be covered. Influence of the concepts on decision making regarding choice of drug, switching a drug within a pharmacologic/therapeutic class to another, compliance, wellness of patients, etc. will be discussed.
Credits: 3
PHAR 523 - PHARMACEUTICAL CARE I
The course introduces the student to the professional practice of pharmaceutical care. The student will learn what knowledge and experience is necessary to provide pharmaceutical care to patients. The course will explain the criteria for a health care professional practice, the meaning of “practitioner,” and what constitutes a profession. The roles of the patient, the practitioner, and selected components of society are described in the context of pharmaceutical care practice.
Credits: 2

PHAR 524 - PHARMACEUTICAL CARE II
Subsequent terms of the course sequence introduce new concepts to the student pertaining to professional practice of pharmaceutical care. The course will continue to build upon and elaborate on the criteria for a health care professional practice, the meaning of the “practitioner,” and what constitutes a profession. Students will continue to accumulate knowledge and skills from these sequences (I-VI) and demonstrate them in ongoing assessments and capstone exams.
Credits: 3

PHAR 530 - INTEGRATED SEQUENCE I
This course is designed to provide background necessary to choose drugs based on their pharmacokinetic (absorption, distribution, metabolism and elimination; ADME), and pharmacodynamics (drug-receptor interactions, agonists, partial agonists, and antagonists) parameters and introduce students to pharmacology of drugs affecting the autonomic nervous system, as well as basic concepts in pharmacotherapy.
Credits: 4

PHAR 531 - INTEGRATED SEQUENCE II: MUSCULOSKELETAL AND IMMUNE SYSTEM DISEASES
This course is designed to provide background necessary to select optimal drug regimens based on biopharmaceutical principles and clinical considerations of the medications presented herein and introduce students to the scientific, clinical, social and economic aspects of drug use pertaining to infectious diseases.
Credits: 4.5

PHAR 532 - INTEGRATED SEQUENCE III: ENDOCRINE AND PULMONARY SYSTEMS
This course is designed to provide background necessary to select optimal drug regimens based on biopharmaceutical principles and clinical considerations of the medications presented herein and introduce students to the scientific, clinical, social and economic aspects of drug use pertaining to endocrine and pulmonary diseases.
Credits: 4.5

PHAR 538 - CLINICAL CASE DISCUSSIONS IN DIABETES
This course is designed to help students gain a better understanding of drug therapy for diabetes, and examine practical issues in diabetes care. Students in this class will participate in discussions of cases of real patients with diabetes. Each week, cases will focus on a different aspect of diabetes management. All students will be expected to lead at least one discussion, as well as participate in discussions each week.
Credits: 1.5

PHAR 539 - ADVANCED PEDIATRIC PHARMACOTHERAPY
This course is designed to provide an advanced understanding of the pathophysiology and pharmacotherapy associated with disease states commonly encountered in the pediatric population including general pediatrics, toxicology, pediatric critical care and trauma, obesity, psychiatric illness, and pharmacy-specific pediatric related issues.
Credits: 1.5

PHAR 541 - INTRODUCTION TO MANAGED CARE PHARMACY
This managed care pharmacy elective course will provide an overview of managed care pharmacy and an understanding of how managed care pharmacy impacts the healthcare system.
Credits: 3

PHAR 542 - INTRODUCTION TO MOLECULAR BIOLOGY AND CELL CULTURE
This course is designed to give the pharmacy and other students in life sciences, allied health fields and biotechnology a basic understanding of usefulness of molecular and cell culture techniques used in biomedical research. An emphasis is placed on the hands-on use of laboratory tools and equipment in order to familiarize the students with current biochemical, molecular techniques. Individual research topic will be given to students. Students will use various laboratory techniques to carry out research. Making hypothesis, literature search, designing of experiments, data collection and analysis, writing assignments and data presentation as appropriate to the discipline are part of the course.
Credits: 3

PHAR 543 - RESEARCH IN BIOTECHNOLOGY
Pharmaceutical Biotechnology is important area of science and technology, and contributes to design and delivery of new therapeutic drugs, the development of diagnostic agents for medical tests, and the beginnings of gene therapy for correcting the medical symptoms of hereditary diseases. This course will introduce the students to various biotechnology techniques used to attenuate chronic disorders like cancer, diabetes etc. Students will be involved in working independently on a research project that involves but not limited to characterization and expression of gene delivery vectors.
Credits: 3

PHAR 544 - ADVANCED DRUG LITERATURE EVALUATION
This course is designed to provide students with an opportunity to develop their literature evaluation skills. Students will review, analyze and present weekly journal articles focused on a clinical topic. This course is discussion-based and involves significant student participation each week. Students will be randomly asked to present different aspects of each assigned article. Faculty will facilitate a discussion of the clinical articles and their role in therapeutic decisions.
Credits: 1.5

PHAR 545 - PHARMACOLOGICAL STUDIES OF PSYCHOACTIVE DRUGS AND CHEMICALS IN ZEBRAFISH
This course is designed to introduce students to research techniques used to measure and characterize behavioral responses to psychoactive drugs and chemicals in an animal model used widely in pre-clinical research (Zebrafish, Danio rerio). Students will work in groups of 2 on a research project focused on characterization of anxiolytic and anxiogenic responses of zebra fish and their modulation by pharmacological agents.
Credits: 3

PHAR 546 - INTRODUCTION TO PSYCHOPHARMACOLOGY
This course will introduce students to functions of the CNS, neurotransmitter-mediated processes in the CNS and their modulation by pharmacologic agents.
Credits: 3
PHAR 547 - CLINICAL BIOSTATISTICS
This course will introduce common biostatistics encountered in medicine such as p-values, confidence intervals, standard deviations, statistical tests, etc. This course will introduce students to calculating statistics such as odds ratios, number needed to treat/harm, and other statistics along with the evaluation of those statistics. This course will utilize medical journal studies to assist students in a critical review of these statistics and how to interpret what is encountered. The course will heavily focus on biostatistics and not journal article reviews. Our focus will be on a basic understanding of statistics as they apply to the medical field. By the end of the course, the student should have a basic understanding of what they will read and review in medical journals in preparation of future IS courses as well as clinical rotations.
Credits: 3

PHAR 548 - RESEARCH IN DRUG METABOLISM AND DRUG INTERACTIONS
Drug metabolism is a critical step in the disposition of therapeutic agents. Modulation of drug metabolism following concomitant intake of multiple medications and/or natural health products leads to clinically relevant drug-drug or drug-herb interactions. In this research course students will have the opportunity to learn about various drug metabolism methodologies and how therapeutic agents and natural health products can potentially cause drug-drug/herb interactions. Students will also gain insight into how to evaluate the pharmacological and clinical relevance of drug interaction studies. In the individually assigned research project student will learn to plan and conduct research, and interpret results.
Credits: 3

PHAR 550 - PHARMACY LAW
Students will learn about the history of pharmacy laws and how these laws structure practice guidelines and impact the distribution/dispensing of drugs. Students also learn about state and local statutes concerning pharmacy practice and healthcare policies relevant to pharmacy practice. The course includes an introduction to law, the Constitution, the role of laws/regulations, judicial system and process, and administrative agencies, with emphasis on the regulation of business and pharmacy practice.
Credits: 3

PHAR 551 - HEALTH CARE SYSTEMS
This course will discuss the U.S. health care system and approaches to ensure medication safety. External forces affecting health care delivery, organizational structure including professionals and policy surrounding those forces will be discussed in general. Specifically, the impact these issues have on the pharmacy profession will be examined as well as the models of pharmacy practice that exist today. Students should gain further understanding of the dynamic health care market.
Credits: 3

PHAR 552 - BIOSTATISTICS AND PHARMACO
This course is designed to introduce to first year pharmacy students, the concepts and methods of biostatistics, epidemiology and studydesign. This course will help students understand the types of clinical research study designs, applied biostatistics, quality of data, applicability of research results and the ability to evaluate studies critically based upon the quality of the reported data and study designs and not solely on the opinion of the researchers.
Credits: 3

PHAR 554 - DRUG LITERATURE EVALUATION
This course is designed to provide pharmacy students with an overview of drug information resources, demonstrate medical information searching and retrieval skills, employ analysis and synthesis of drug information, and strengthen written and verbal communication skills. Students will learn how to critically evaluate biomedical literature and apply this knowledge to resolve issues regarding optimal medication use and medication-related adverse events.
Credits: 3

PHAR 556 - DISPERSED SYSTEMS
Dispersed or heterogeneous dosage forms constitute a special and continuously expanding class of pharmaceutical products. This course will develop students' knowledge in the theoretical basis and practical application of various techniques in the design and stabilization of pharmaceutical systems such as colloids, suspensions, emulsions, gels and pastes, which constitute some of the most frequently-compounded medicinal products in pharmacy practice. The knowledge and skills required by pharmacists for handling, dispensing, and counseling patients on new and emerging dosage forms of mini- and nano-emulsions, liposomal and niosomal drug delivery systems will also be covered.
Credits: 3

PHAR 557 - DRUG DEVELOPMENT PROCESS
This course will focus on the entire process of discovering, developing (including preformulation or early phase development) and testing (preclinical through clinical) a new drug substance through the various phases of its life cycle (Discovery, in vitro and in vivo testing, ADME, Toxicology and Biodistribution, Investigational New Drug (IND) submission and approval, Human Clinical trials and New Drug Application (NDA). Papers will be assigned and classes would be run as seminar-type sessions with enrollees describing what each step entails and the type of information that needs to be gathered so to apply for an investigational New Drug approval. Included would be a description of the purpose and design of each Phase of human clinical trials.
Credits: 3

PHAR 558 - SPECIALTY PHARMACY THERAPEUTIC CREDENTIALS I
This course incorporates The National Association of Specialty Pharmacy's (NASP) newly-launched Specialty Pharmacy Education Center (SPEC) to provide an opportunity for students to earn a credential in a specialty pharmacy topic. Students will be expected to successfully complete a specified number of on-line, asynchronous modules in pre-determined advanced subject areas to which they were introduced in their previous pharmacy courses. Additional credentials in specialty pharmacy subject areas will position a student more favorably for residency programs and/or employment upon graduation.
Credits: 3

PHAR 559 - PHARMACOGENOMICS
Pharmacogenomics is increasingly becoming an important component of pharmacotherapy that relates genetic composition of an individual to drug response. The primary objective of this course is to provide students an understanding of the principles of pharmacogenomics in the context of variability in drug response and the application of genetic profile to drug development and drug treatment. Future pharmacists will be educated on the genetic basis of pharmacokinetics and pharmacodynamics i.e. drug efficacy, adverse drug reactions and drug-drug interactions. Following completion of the course, students should be able to appreciate the pharmacogenomics discipline and how it can impact the treatment outcomes in patients.
Credits: 1
PHAR 560 - BIO DRUG DISCOVERY RES I
Focus and emphasis will be on working with drug candidate molecules, both proteinaceous and small molecule, learning how to purify and characterize such agents, and test agents for medical, biochemical and immunological reactivities. Focus will also be placed on aspects of physiochemical properties of drug substances that must be considered in designing and developing novel drug substances that may one day enter into human clinical trials.
Credits: 3
Attributes: Lab Course

PHAR 561 - RES IN DRUG DESIGN & SYNTH I
This course is designed to introduce students to research in medicinal chemistry. A research project/problem is assigned to each student requiring specialized equipment and techniques. Students will learn to plan and conduct research, and interpret results.
Credits: 3
Attributes: Lab Course

PHAR 564 - INDEPENDENT CLINICAL RES I
The objective of this elective is to learn practical aspects of clinical research, to participate in key elements of clinical research (i.e. protocol composition, data collection, manuscript publication), and contribute to ongoing clinical pharmacy research at an academic medical center. Students will be expected to work independently with minimal oversight. Resources will be provided for the clinical research students to facilitate any and all research related activities.
Credits: 3
Attributes: Lab Course

PHAR 567 - PHARMACEUTICAL BIOTECHNOLOGY
Pharmaceutical Biotechnology is an increasingly important area of science and technology, and contributes to design and delivery of new therapeutic drugs, the development of diagnostic agents for medical tests, and the beginnings of gene therapy for correcting the medical symptoms of hereditary diseases. This course is designed to provide pharmacy graduate students with a basic understanding of the macromolecular drugs such as proteins and nucleic acids that have emerged as a new class of therapeutic agents due to their unique biological and pharmacological properties.
Credits: 3

PHAR 570 - PROFESSIONAL PRACTICE I
Professional Practice I & Introductory Pharmacy Practice Experiences foundations are each an 80 hour sequence of internship activities which provides a number of experiential activities that integrate knowledge and skills you will be learning within your didactic courses. The continuum will serve as building blocks to prepare you for the advanced practice experiences. The learning activities will take you into authentic settings to develop important professional abilities.
Credits: 2

PHAR 572 - PROF PRACTICE III & IPPE
Professional Practice I, II, III, IV & Introductory Pharmacy Practice Experiences (IPPEs) foundations are a 320-hour four-term sequence of internship activities which provides a number of experiential activities that integrate knowledge and skills you will be learning within your didactic courses. The continuum will serve as building blocks to prepare you for the advanced practice experiences. The learning activities will take you into authentic settings to develop important professional abilities.
Credits: 2

PHAR 574 - RESEARCH IN DRUG DESIGN AND SYNTHESIS II
Continuation of PHAR 561.
Credits: 3

PHAR 601 - PHARMACEUTICAL CARE III
Subsequent terms of the course sequence introduce new concepts to the student pertaining to professional practice of pharmaceutical care. The student will build upon previous knowledge and engage in experiences necessary to provide pharmaceutical care to patients. Students will continue to hone and accumulate knowledge and skills from topics pertaining to renal, genitourinary, and cardiovascular pharmacotherapy and demonstrate these in ongoing assessments and capstone objective structured clinical examinations.
Credits: 2
Attributes: Lab Course

PHAR 602 - PHARMACEUTICAL CARE IV
This course is fourth in the series of six pharmaceutical care lab courses. Throughout this series, lecture, lab, and active learning formats are utilized. PC Lab IV specifically addresses practical applications of topics covered in Integrated Sequence VI and VII. These topics include musculoskeletal injuries, management of hepatic drug interactions, prevention and management of ulcer, ostomy products and OTC gastrointestinal agents. Additionally, activities to reinforce knowledge of the top 150 drugs and nonprescription therapeutics are continued.
Credits: 2

PHAR 603 - PHARMACEUTICAL CARE V
This course is fifth in the series of six pharmaceutical care lab courses. Throughout this series, lecture, lab, and active learning formats are utilized. PC Lab V specifically addresses practical applications of topics covered in Integrated Sequence VIII and IX. These topics include psychiatric and neurologic conditions. Additionally, activities to reinforce knowledge of the top 150 drugs and nonprescription therapeutics are continued. PC Lab V also addresses concepts and skills related to sterile preparations.
Credits: 2

PHAR 604 - PHARMACEUTICAL CARE VI: OBJECTIVE STRUCTURED CLINICAL EXPERIENCE
This course is designed to review and assess clinical skills and concepts learned in previous of Integrated Sequence and Pharmaceutical Care Lab courses. Additional focus will be on accessing and interpreting appropriate clinical practice guidelines.
Credits: 3
PHAR 605 - PRINCIPLES OF DRUG ACTION
This course is designed to teach biopharmaceutical researchers about the fundamentals of drug action related to pharmacokinetics, pharmacodynamics and toxicology. A major goal of this course is to impart knowledge on the chemical and pharmacological properties related to drug action and drug development. Students will be introduced to the various targets (e.g. receptors, ion channels, enzymes) for drug development and factors that affect drug action.
Credits: 3
Course Notes: Prerequisites: PharmD Pharmacology Course

PHAR 606 - INTRODUCTION TO PHARMACEUTICAL DOSAGE FORMS AND BIOPHARMACEUTICS
The course focuses on physical-chemical principles governing pharmaceutical systems, dosage form design and development. Students will learn how physicochemical properties of drugs affect their formulation into dosage forms and impacted by excipient selection and processing variables, and the biopharmaceutical considerations needed for design of safe, efficacious, stable and acceptable products. Students will be introduced to drug development and approval processes which could be integrated with student's specific research projects.
Credits: 3
Course Notes: Prerequisites: Pharmaceutics

PHAR 609 - THESIS DESIGN AND PROPOSAL
The research course is focused on the student developing a research proposal with his advisor on a topic selected by the advisor. The research topics will range from pharmacology, pharmacy science, drug delivery to traditional medicine, medicinal chemistry, molecular pharmacaceutics, etc. The student will then present the proposal to research committee that will be composed by the research advisor as a final assessment of the success of the design.
Credits: 1

PHAR 610 - THESIS RESEARCH
The research course will be fully lab based. It will comprise of student-advisor skill-enhancing activities such as training in scientific techniques, journal clubs and research update presentations.
Credits: 2

PHAR 611 - CLINICAL CASE DEFENSE
This course is designed to provide an advanced application of clinical skills through a presentation of a patient case. Students are able to display their knowledge and communicate this knowledge to faculty members and their peers. Through attendance of their peers’ presentations, students will have the opportunity to compose and answer questions regarding the disease states presented. This class will help students improve their clinical knowledge, problem-solving skills, presentation skills, communication skills, and self and peer-evaluation skills.
Credits: 0.5

PHAR 624 - DRUG METABOLISM AND DRUG INTERACTIONS
This course is designed to teach biopharmaceutical researchers about the principles of biotransformation related to pharmacokinetics and pharmacodynamics. Metabolism is a critical step in the disposition of therapeutic agents and its modulation by drugs and health supplements can lead to drug interactions. In this course students will have the opportunity to learn about various drug metabolism methodologies, drug interactions and how these principles are applied in the drug development process.
Credits: 3
Course Notes: Prerequisites: Pharm D Pharmacology

PHAR 625 - RESEARCH IN METABOLIC SIGNALING
This course is designed to provide background and also enhance the understanding of the students in the area of metabolic signaling using molecular biology tools like ELISA, Western Blot and Real Time Polymerase Chain Reactions (RT–PCR). Focus will be on cardiovascular and renal tissues, and cell lines of these tissues will be used to study how these tissues process metabolic substrates like glucose and fatty acids under normal and metabolically stressful conditions like nutrient excess and diabetes.
Credits: 3

PHAR 626 - HISTORY OF PHARMACY IN AMERICA
This course is designed to introduce the pharmacy student to the history of pharmacy. This will be accomplished by focusing upon the historical development of pharmacy in the United States. By examining the growth and professionalization of the field, its statutory regulation and its product development students will be able to apply the lessons of history to current and future practice philosophies. The history of pharmacy is an area that receives little attention in the pharmacy curriculum but its lessons and tradition are of great importance in recognizing and understanding the professionalism required of a pharmacist.
Credits: 1.5

PHAR 630 - INTEGRATED SEQUENCE IV: RENAL AND GENITOURINARY SYSTEMS
Integrated Sequence IV. Renal and Genitourinary Systems. This course is designed to provide background necessary to select optimal drug regimens based on biopharmaceutical principles and clinical considerations of the medications presented herein and introduce students to the scientific, clinical, social and economic aspects of drug use pertaining to renal and genitourinary diseases.
Credits: 4.5

PHAR 631 - INTEGRATED SEQUENCE V: CARDIOVASCULAR SYSTEMS
Integrated Sequence V: Cardiovascular Systems. This course is designed to provide background necessary to select optimal drug regimens based on biopharmaceutical principles and clinical considerations of the medications presented herein and introduce students to the scientific, clinical, social and economic aspects of drug use pertaining to cardiovascular diseases.
Credits: 4.5

PHAR 632 - INTEGRATED SEQUENCE VI: GASTROINTESTINAL AND HEPATOBILARY
This course is designed to provide background necessary to select optimal drug regimens based on biopharmaceutical principles and clinical considerations of the medications presented herein and introduce students to the gastrointestinal and hepatobiliary systems.
Credits: 4.5

PHAR 633 - INTEGRATED SEQUENCE VII: INFECTIOUS DISEASES
This course is designed to provide background necessary to select optimal drug regimens based on biopharmaceutical principles and clinical considerations of the medications presented herein and introduce students to the scientific, clinical, social and economic aspects of drug use pertaining to the musculoskeletal and immune systems.
Credits: 4.5
PHAR 634 - INTEGRATED SEQUENCE VIII: NEUROLOGIC DISORDERS
This course is designed to provide background necessary to select optimal drug regimens based on biopharmaceutical principles and clinical considerations of the medications presented herein and introduce students to the scientific, clinical, social, and economic aspects of drug use pertaining to the neurological systems. Credits: 4.5

PHAR 635 - INTEGRATED SEQUENCE IX: PSYCHIATRIC AND BEHAVIORAL CONDITIONS
This course is designed to provide background necessary to select optimal drug regimens based on biopharmaceutical principles and clinical considerations of the medications presented herein and introduce students to the scientific, clinical, social and economic aspects of drug use pertaining to the treatment of psychiatric and mood disorders, and related behavioral conditions. Credits: 4.5

PHAR 636 - INTEGRATED SEQUENCE X: HEMATOLOGIC AND ONCOLOGIC DISORDERS
This course is designed to provide background necessary to select optimal drug regimens based on biopharmaceutical principles and clinical considerations of the medications presented herein and introduce students to the scientific, clinical, social and economic aspects of drug use pertaining to the treatment of hematologic and oncologic disorders. Credits: 4.5

PHAR 637 - INTEGRATED SEQUENCE XI: SPECIAL PATIENT POPULATIONS/CONDITIONS
This course is designed to provide background necessary to select optimal drug regimens based on biopharmaceutical principles and clinical considerations of the medications presented herein and introduce students to the scientific, clinical, social and economic aspects of drug use pertaining to the special patient populations including critically ill patients, geriatric patients, pediatric patients, women’s health needs, patients with other illnesses that require special considerations. Credits: 4.5

PHAR 638 - PHARMACEUTICAL ANALYSIS
The goal of the course is to introduce students to identification and quantitation of pharmaceuticals, including literature search and writing of laboratory reports Lecture topics that will include identification and classical quantitation of pharmaceuticals using the following techniques – gas chromatography, high performance liquid chromatography, visible, UV, infra-red, and fluorescence spectroscopy. Bioanalytical chemistry techniques such as electrophoresis, mass spectrometry, enzyme immunoassays, nucleic acid amplification and protein sequencing will be discussed. Credits: 3

PHAR 640 - THERAPEUTIC DRUG MONITORING AND CLINICAL PHARMACOKINETICS
This course is designed to provide a broad perspective on the emerging field of pharmacogenomics and its application to alterations of drug pharmacokinetics and pharmacodynamics, therapeutic drug monitoring and applications for pharmacotherapy of various diseases, including, but not limited to, those affecting cardiovascular, endocrine, hematologic, nervous, respiratory, renal, and immune systems, and cancer. Credits: 3

PHAR 642 - PHARMACY PRACTICE RESEARCH IN AMBULATORY CARE
Pharmacy practice research focuses on pharmacist care and its effect on patient outcomes. This research course will provide students with a working knowledge and hands-on experience of conducting pharmacy practice research in ambulatory care. Students in this course will be exposed to all components of research in pharmacy practice. Each week, focus will be placed on a different aspect of research – Idea generation, Literature review, Proposal development, Data collection tool development, IRB submission, Data collection, Data entry and analysis, Abstract writing and Presentation. Credits: 3

PHAR 650 - PRACTICE MANAGEMENT
This course introduces Pharmacy students to various management roles in Pharmacy Practice with the aim of preparing healthcare leaders that will deliver safe, effective and efficient care across different settings. Students will develop a strong foundation in management sciences with application and integration of Medication Therapy Management (MTM). Credits: 2

PHAR 651 - CURRENT TOPICS IN INFECTIOUS DISEASE
This course will cover current and emerging topics in infectious diseases including practical approaches to antimicrobial stewardship, emerging infectious diseases and public health concerns, antimicrobial resistance, pathogens of bioterrorism, and other infectious diseases topics not covered in the IS-VII course. Credits: 1.5

PHAR 652 - HEALTH ECONOMICS & OUTCOMES
This course is designed to introduce students to the concepts and methods of health economics and outcomes assessments and its application to pharmacy practice. This course will help students understand the concepts and methods of economic analyses and its role in clinical decision making, provide a brief review of decision modeling techniques; introduce to the concepts and importance of medication adherence, patient satisfaction, quality of life and health related quality of life in health care. Credits: 3

PHAR 653 - COMMUNITY OUTREACH ON TRENDING OTC TOPICS
This active learning course is designed to expose students to outreach programs that will provide them with an opportunity to improve clinical, communication, and social/emotional skills through conceptualization, preparation, and delivery of a presentation on a popular non-prescription medication topic to the local community on a site to be determined. Credits: 3

PHAR 654 - BIOTHERAPEUTIC DRUGS
This course will focus on currently marketed biotherapeutic drugs – what they are – how they work (i.e. their biochemical and/or immunological mechanism of action) – how they are manufactured and formulated, and the benefit/risk aspects governing their use. Three broad classes of biotherapeutic drugs will be emphasized: 1.) Peptides/or small proteins; 2.) Cytokines; and 3.) Monoclonal antibodies and Fc Fusion proteins. Specific drugs within each class will be highlighted and product insert summary documents will be used to methodically discuss each subsection of such documents in scientific (methodological) detail, pathways or biological responses targeted by each drug, and the rationale behind why specific details and testing were required prior to obtaining FDA approval to market these drugs. Credits: 3
PHAR 655 - POST-GRADUATE TRAINING
This course will educate and prepare students for postgraduate residency training. It will expose you to different postgraduate training opportunities including community pharmacy residencies, ambulatory care residencies and fellowships. It will increase knowledge, interest, and confidence among students about residency training and identify and develop the skills needed for application to these programs.
Credits: 1.5

PHAR 657 - PUBLIC HEALTH/HEALTH POLICY
This course presents the basic and critical issues in public health within the context of population healthcare and an in-depth discussion of the role of pharmacy professionals in promoting and protecting the health of the public. In order to address public health needs, pharmacists must understand and address the fundamental determinants of health in a population in order to provide effective health promotion, disease prevention, and quality health services. This course focuses on strategies for the identification and management of the healthcare needs of specific populations.
Credits: 1

PHAR 659 - PHARMACEUTICAL UNIT OPERATIONS IN ADVANCED COMPOUNDING TECHNOLOGY
Students will gain deeper understanding of the theoretical principles and mechanisms of action of some crucial unit operations including size reduction and separation, mixing, compression and consolidation (compaction), evaporation, drying, centrifugation, etc. that are commonly applied in compound practices. Student will formulate, compound and assess quality and stability of model formulations of select drugs among those commonly compounded or are likely to be compounded in clinical, community or hospital setting.
Credits: 3

PHAR 660 - ADVANCED MEDICINAL CHEM.
The course introduces students to different research strategies/techniques involved in drug discovery and design such as rational drug design, computational methods, high throughput and fragment based screening.
Credits: 3

PHAR 662 - REGULATORY SCIENCE
The course will focus on guidelines that are used in drug discovery, drug development and the approval process.
Credits: 3

PHAR 666 - NUTRITION AND OBESITY
This course is designed to provide a comprehensive modern knowledge pertaining to the causes and consequences of this serious health issue, therefore, course will serve as a practical educational resource. This course will also focus on relevant nutrition information, the epidemiology, prevention and treatment options. This course will leave students with a clear understanding of the scientific, clinical and social aspects of obesity, and increase the awareness of future obesity research and public health policy.
Credits: 3

PHAR 670 - PRF. PRACTICE IV AND IPPE
Professional Practice IV & Introductory Pharmacy Practice Experiences (IPPEs) are an 80 hour sequence of internship activities (total of 240 hours) which provides a number of experiential activities that integrate knowledge and skills you will be learning within your didactic courses. The continuum will serve as building blocks to prepare you for the advanced practice experiences. The learning activities will take you into authentic settings to develop important professional abilities.
Credits: 2

PHAR 680 - INTERPROFESSIONAL COLLABORATION
Interprofessional Collaboration Seminar (one-hour weekly) and the Interprofessional Collaboration simulation experiences together provide a foundational sequence of didactic and experiential activities that will enable the student to become an integral member of an interdisciplinary health care team. This course is designed to allow students to apply the facts, information and concepts gained in didactic coursework to professional practice through an interprofessional practical experience (IPE) under the supervision of a healthcare professional within a health care setting. The IPE seminars and simulations encompass experiences and activities to enhance communication with patients, prescribers, and other health care professionals and to deliver interprofessional care with positive patient outcomes.
Credits: 1

PHAR 750 - HEALTH OUTCOMES RESEARCH
This elective course is designed to offer students hands on research experience in the area of health outcomes research. Students will work closely with the instructor(s) in developing a new research proposal or work on an ongoing research project. Students’ will be presented with the opportunities of applying the concepts and principles of pharmaceconomics and health outcomes that they learned in their didactic coursework (PHAR 652) and gaining research skills in this area. Credits: 3

PHAR 751 - RESEARCH IN PUBLIC HEALTH
In this course students will learn how to improve public health among the underserved population. Specifically, students will identify a health problem, assess patients’ needs, examine potential solutions, select the best framework to address the problem, implement a health initiative program, and assess the outcomes. Ultimately, students will learn how to be effective members of the interdisciplinary team to enhance public health.
Credits: 3

PHAR 753 - ADVANCED PHARMACOKINETICS SIMULATIONS
Advanced pharmacokinetics simulation is a computer-lab based course focusing on modeling and simulation of rate processes of Absorption, Distribution, Metabolism and Excretion (ADME) and integration of dosage form characteristics with the potential therapeutic outcome and adverse effects. Students will have the opportunity of learning with literature data (using Gastroplus® software) and applying their skills to clinical data, generating pharmacokinetic parameters and applying the information to dosage determination and adjustments for virtual patients. Students’ understanding of basic biopharmaceutics and pharmacokinetics principles will be reinforced to prepared them to apply the knowledge gained in the design, implementation and management of drug therapy in a community pharmacy, hospital and clinical settings.
Credits: 3

PHAR 754 - NUCLEAR PHARMACY
This course will expose the student to topics in nuclear pharmacy and nuclear medicine. During the course the student will be provided with the fundamentals that nuclear pharmacists encounter while meeting the NRC criteria to handle radiopharmaceuticals.
Credits: 1.5
PHAR 756 - TOXICOLOGY FOR PHARMACISTS
This didactic elective course will educate the future pharmacists about the principles of toxicity including dose-response relationships, target organ toxicity, bioaccumulation, and toxicokinetics. The application of toxicity principles will be highlighted in the perspective of pharmacy practice and human health risk assessment. Students will be introduced to how descriptive toxicity tests are used to set the first in human dose for clinical trials.
Credits: 1.5

PHAR 757 - PRINCIPLES OF PALLIATIVE CARE
This elective will provide students with an understanding of the pharmacist’s role in pain control, palliative, and end-of-life care.
Credits: 3

PHAR 758 - CLIN. CASES IN ANTITHROMBOTIC
This course will provide students with a working knowledge of basic and advanced pharmacotherapeutic problems related to antithrombotic and antiplatelet therapy. Students in this class will participate in discussions of cases of real patients on antithrombotic or antiplatelet agents. Each week, cases will focus on a different aspect of antithrombotic/antiplatelet management. All students will be expected to lead at least one discussion, as well as actively participate in weekly discussions.
Credits: 1.5

PHAR 763 - INDIVIDUALIZED THERAPY AND PERSONALIZED MEDICINE
This course is aimed at developing students’ knowledge base in how differences in human physiological and pharmacokinetic-pharmacodynamic parameters are being utilized in the optimization of drug therapy to achieve individualized therapeutic care. Students will be guided to explore the historical and modern perspectives of individualized medicine, patient parameters and diagnostic methods from gross pathologic to molecular levels.
Credits: 3

PHAR 765 - VETERINARY PHARMACY
Veterinary Pharmacy provides a foundation for a pharmacist interested in providing care to nonhuman patients. It focuses on the care of dogs and cats, but concepts can be applied to other species. Veterinary pharmacy references, legal aspects of dispensing, and unique physiologic and pharmacokinetic differences among species will be highlighted. Prevention and management of common disease states will be addressed. Other topics include drug administration, zoonotic infections, dog bite prevention, immunizations, triage, wound care, and appropriate use of OTCs. Class periods will feature a combination of lecture, student research, and skills. Pets will be present in several class sessions.
Credits: 3

PHAR 766 - LEARNING, MEMORY, DISEASES AND DRUGS
This course is designed to introduce pharmacy students to types of memory, processes in memory acquisition, storage and retrieval and the underlying molecular and genetic mechanisms; and drugs used in the management of diseases with memory impairments.
Credits: 3

PHAR 770 - ADVANCED PATIENT CARE - COMMUNITY
Students will apply the facts, information and concepts gained in didactic coursework to professional practice through practical experience under the supervision of a licensed pharmacist in a community pharmacy setting. The Community Pharmacy Practice rotation encompasses medication dispensing and control, communicating with patients, prescribers, and other health care professionals and understanding the basic principles of managing workflow to deliver positive patient outcomes. Community pharmacists are the most visible and available to the public. This rotation develops student competence to provide pharmaceutical care in the community setting and extends students’ image of community pharmacy practice beyond traditional dispensing. This experience contributes to the integration of clinical knowledge and skills with the basics of communication, medication dispensing and control.
Credits: 8

PHAR 771 - ADVANCED PATIENT CARE - HOSPITAL
Students will apply the facts, information and concepts gained in didactic coursework to professional practice through practical experience under the supervision of a licensed pharmacist in a hospital pharmacy setting. The hospital rotation help students integrate knowledge and theoretical concepts across the curriculum in an environment that encourages and requires interactions between students, preceptors and patients. Our goal is to enable students to safely and accurately perform the activities associated with the receipt, preparation and dispensing of medication orders, perform required drug control activities, support the mission of the pharmacy department and activities that maintain productive relationships with other departments in the hospital.
Credits: 8

PHAR 772 - ADVANCED PATIENT CARE-AMBULATORY CARE
Students will apply the facts, information and concepts gained in didactic coursework to professional practice through practical experience under the supervision of a licensed pharmacist in an ambulatory care setting. The ambulatory care rotations rotation helps students integrate knowledge and theoretical concepts across the curriculum in an environment that encourages and requires interactions between students, preceptors and patients. Our goal is to enable students to provide safe, effective and cost-efficient disease state management by assuring the safe, accurate preparation and dispensing of medications, developing patient-specific pharmacotherapy plans and optimizing patients’ outcomes. Students should gain experience in treating common disease states in the ambulatory care environment, including but not limited to endocrine disorders, cardiovascular diseases, commonly occurring outpatient infectious diseases, respiratory diseases by taking patient histories, developing patient-specific recommendations, providing counseling, monitoring patient outcomes and consulting with other healthcare providers.
Credits: 8
PHAR 773 - ADVANCED PATIENT CARE-ACUTE CARE MEDICINE
Students will apply the facts, information, and concepts gained in didactic coursework to professional practice through practical experience under the supervision of a licensed pharmacist in a hospital setting. The adult internal medicine advanced practice rotation requires students to integrate knowledge and theoretical concepts across the curriculum in an environment that requires appropriate interactions between students, preceptors, other healthcare professionals, and patients. The goal is to enable students to recommend and provide safe, effective, and cost-efficient patient care by developing evidence-based, patient-specific pharmacotherapy plans that optimize patient outcomes and have the support of the other healthcare practitioners involved. Students should gain experience in treating common disease states in the adult internal medicine population, including but not limited to endocrine disorders, cardiovascular diseases, infectious diseases, respiratory diseases, and renal/liver dysfunction.
Credits: 8

PHAR 774 - APPE ELECTIVE ROTATION I
Students will apply the facts, information, and concepts gained in didactic coursework to professional practice through practical experience under the supervision of a preceptor with specialized skills relevant to the specific nature of the rotation. Potential areas in which this rotation may occur include, but are not limited to: managed care, pharmacy supervision, healthcare policy, informatics, healthcare business management, academic pharmacy, program development or implementation in a healthcare organization and other areas. The goals of these rotations will be individualized to the setting in close proximity in time to the rotation in order to assure they are relevant to the opportunities present then. The availability of these rotations varies depending on the ability of the rotation site to effectively supervise the student at different points in time.
Credits: 8

PHAR 775 - APPE ELECTIVE ROTATION II
Students will apply the facts, information, and concepts gained in didactic coursework to professional practice through practical experience under the supervision of a licensed pharmacist in a hospital setting. The advanced care medicine rotation requires students to integrate knowledge and theoretical concepts across the curriculum in an environment that requires appropriate interactions between students, preceptors, other healthcare professionals and patients in the advanced areas of inpatient care. The goal is to enable students to recommend and provide safe, effective, and cost-efficient patient care by developing evidence-based, patient-specific pharmacotherapy plans that optimize patient outcomes and have the support of the other healthcare practitioners involved. Students should gain experience in treating complex disease states within the internal medicine population, including but not limited to oncology, infectious disease and critical care.
Credits: 8
