POS 250 - TRANSIT IN TRANSITION
What is "environmental justice"? How is environmental justice different than "environmentalism" or "conservation"? How and why has use (and abuse) of the earth's resources in the US (and Chicago specifically) become unequal? How can individuals, governments, and communities restore greater justice? What are the stakes if we fail to do so? These are some of the questions we will engage this course, as well as generating new ones. Protecting rights may be the ultimate justification for government. Yet here and elsewhere, governments fail to protect, and often violate, basic rights. The US considers itself an exemplar of justice, but allows some parts of the population to consume huge amounts of the earth's resources, through systematic deprivation of other parts of the population. Residents of urban areas have been, traditionally, simultaneously the ones most likely to be exposed to environmental ills and the most unlikely to benefit from environmental goods (including safe drinking water, clean air, safe soil, uncontaminated watersheds, and safe outdoor spaces). This has created, for many communities, systematic and mutually reinforcing disadvantages. Increasing disconnection from nature can create greater atomism, lack of social capital, and lack of political power make it particularly hard to advocate for greater social and environmental justice for the very people who have most born the burdens of injustices. This state of affairs presents an inescapable practical and ethical challenge that we must meet. Therefore we will explore cases of environmental injustice here in the Chicago area, through site visits and partnerships with outside experts. The course will engage us in local-level investigations of global political and social trends.
